

Validation of categorization of privacy law developer concerns

This is a short survey to validate a list created for data privacy law developer concerns, based on GDPR, CCPA/CPRA and UK DPA. The list was created by studying GitHub issues in order to understand which concerns/problems developers face when they have to deal with privacy law compliance in their systems, and primarily OSS systems.

No personal data are gathered. The use will be solely for research purposes. By participating, you provide your consent to the above.

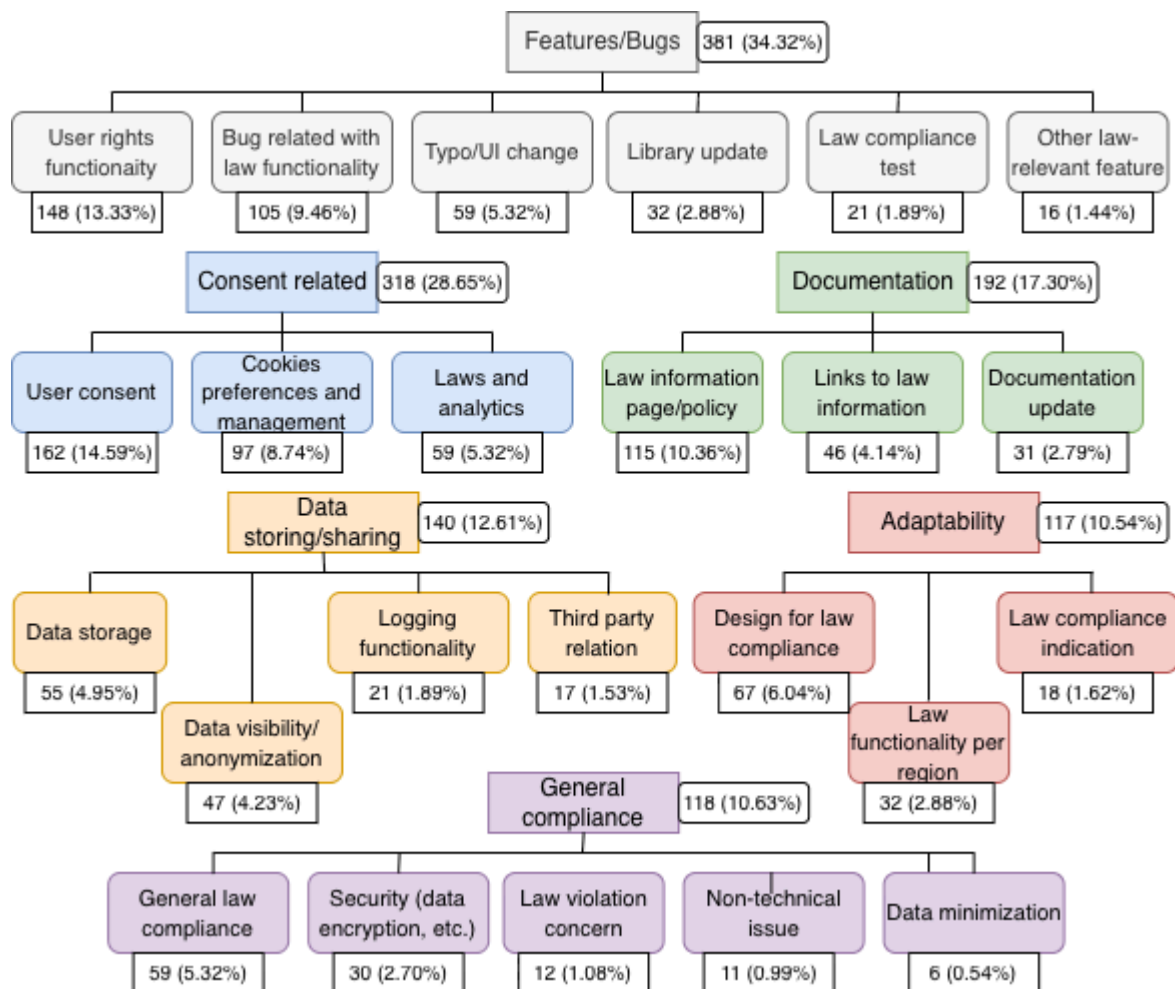

You can find the list of data privacy law developer concerns created [here](#) and in the figure below.

Please go through the above list and then answer the following questions concerning the categories.

For questions, please contact:

GitHub issues privacy compliance taxonomy

- Are the above categories and their descriptions clear to you? Please provide any comments you might have on clarity.

2. Do you think any category is missing from the above, or that any category should be deleted? *

3. In which category(/-ies) from the ones below would you place the following? *
- Please select only the closest category(/-ies).

Title: Initial implementation of U.S. Privacy String (CCPA Opt-Out Storage Format)

Body: This implements the IAB specification found [here](#).

It can be used to parse consent passed in requests with the parameter us_consent.

Check all that apply.

- ☐ Perform data visibility/anonymization
- ☐ User consent mechanisms
- ☐ Appropriate design for law compliance
- ☐ Applying data minimization
- ☐ Library update
- ☐ User rights functionality
- ☐ Other: _____

4. In which category(/-ies) from the ones below would you place the following? *

Please select only the closest category(/-ies).

Title: Update Pro Consent API to include Data Sharing

Body: USER STORY

As a data processor, I want to query for the consent status of a data subject, so that I know what I am allowed to use.

DETAILS

In Pro's Control Panel today an admin can create Data Use Cases. These use cases show under Consent Management in the Privacy Center for a user to opt in or out. We will add Data Sharing as a new type when creating data use cases to comply with CPRA/VCPA in [#1397](#) and <https://github.com/ethyca/fidesctl-plus/issues/321>.

We need to add the Data Sharing to the existing Consent API.

[Pro Docs - Consent API](#)

[EPIC DOC](#)

AC

- Given that a user has opted in to data sharing, when I query for their ID by email, then I get a record of the timestamp their consent was recorded and the ID of the consent type granted.
- Given that a user has NOT opted in to data sharing, when I query for their ID by email then I get an empty response or a "not found/404" and therefore now that I cannot process sensitive information.
- Given that a user has changed their opt-in status from consenting to data sharing to NOT consenting to data sharing, when I query for a their ID by email, then I get a record of the consent with a property which indicates they are opted out.

Check all that apply.

- ☐ Perform data visibility/anonymization
- ☐ User consent mechanisms
- ☐ Appropriate design for law compliance
- ☐ Applying data minimization
- ☐ Manage third parties and data
- ☐ User rights functionality
- ☐ Handle Cookies preferences and management
- ☐ Other: _____

5. In which category(/-ies) from the ones below would you place the following? *

Please select only the closest category(/-ies).

Title: [DW-0] GDPR Transparency HTML markup fix

Body: NONE

(Source: <https://github.com/NHS-digital-website/hippo/pull/497>)

Check all that apply.

- ☐ Perform data visibility/anonymization
- ☐ Typo/UI change
- ☐ Handle user analytics
- ☐ Applying data minimization
- ☐ Manage third parties and data
- ☐ User rights functionality
- ☐ Handle Cookies preferences and management
- ☐ Other: _____

6. In which category(/-ies) from the ones below would you place the following? *

Please select only the closest category(/-ies).

Title: Only require e-mail for b2c booking

Body: Following conventions of e-commerce guest checkouts that require only e-mail address (e.g. <https://stripe.com/payments/checkout>), and in the spirit of GDPR only requiring a minimum of personal data to be captured for provision of a service, this specification has only "e-mail address" as a required field.

This also removes complexity in some systems where an e-mail address may be shared by multiple family members, as the Person is not named.

Please comment with use cases that require more than just "e-mail" to be captured for a guest checkout transaction.
